**MOTION INTERNATIONAL INTRODUCES REMOTE APPLICATIONS MANAGEMENT  
SERVICE TO U.S. MARKET**

*Service Ensures a Live, Fast Response to Day-to-Day Oracle Activities*

**MINNEAPOLIS**, February 28, 2007 — Motion International, an exclusively Oracle professional services company for manufacturing firms with international operations, has introduced a new service to the U.S. market — Remote Applications Management (RAM). Until today, this service was available only to Motion's European clients.

With Motion's RAM services, clients outsource the management of their Oracle application to Motion, ensuring a live, fast response to day-to-day, non-critical activities and issues, and freeing their internal staff to focus on core activities that increase company efficiency and user satisfaction.

Motion's RAM services include:

- **Remote Support** – Functional and technical web-based applications support 24/7
- **Remote Administration** – Patch application, environment cloning, startup and shutdown procedures
- **Remote Monitoring** – Monitoring and gathering statistics against the RDBMS, the technology stacks and various applications modules

Motion offers its services 24/7 over a fully secure online connection. The firm leverages a vast and complete internal knowledgebase of cases already studied and resolved.

“Many of our clients tell us that they spend so much time fighting fires that they don’t have time to focus on their strategic initiatives”, said Julie Johnson, president of Motion International. “This service frees up their time to do so, and it leverages our proactive approach to applications management.”
